```python
1  # Function to write some data to a file
2  def write_to_file(file_path):
3      with open(file_path, "w") as file:
4          file.write("Hello, world!\n")
5          file.write("This is a sample file.\n")
6          file.write("Python file handling is fun!\n")
7
8  # Function to read data from a file
9  def read_from_file(file_path):
10     with open(file_path, "r") as file:
11         content = file.read()
12         print("Content of the file:")
13         print(content)
14
15
16 #driver code
17 file_path = "sample_file.txt"
18 write_to_file(file_path)
19 read_from_file(file_path)
```

```
Content of the file:
Hello, world!
This is a sample file.
Python file handling is fun!
```
